**OVERVIEW**

I am an incoming postdoctoral researcher studying cryptography at UC Berkeley, hosted by Prof. Sanjam Garg. In the meantime, I am working as a freelancer at CryptoLab, a homomorphic encryption startup. I obtained my Ph.D. in Mathematical Sciences at Seoul National University, advised by Prof. Jung Hee Cheon. I am broadly interested in cryptography from theory to practice. Currently, my research focus is on cryptographic primitives for secure computation (e.g., homomorphic encryption, secure multiparty computation) and their applications (e.g., privacy-preserving machine learning).
